ABSTRACT (new)

A terminal system has a mass spectrometric for inspecting of dangerous substances is installed in an inspection area, and a support system for determining whether or not a dangerous substance is present and identifying the type of the substance, based on the mass spectrometric data on the target element that has been measured by the mass spectrometric, is installed in a security service enterprise's office. Both systems are connected to each other via a communication network so that they can exchange information. Thus, the support system can send the determination result of dangerous substances and a precautions guide to the terminal system via the communication network.

Art Unit: 2636

DETAILED ACTION

EXAMINER'S AMENDMENT

1. The application has been amended as follows: The Amended of abstract filed on 03 February 2006 is corrected to eliminate the phrases "means" and "said". The new abstract is attached herewith a separate sheet.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: there are no prior arts teaching or suggesting of a security terminal system for determining a kind or existence of dangerous substance having a terminal system provided in an inspection room of the dangerous substance and a support system connected to the terminal system through a communication line:

the terminal system comprises a sampling means for sampling a substance to be inspected, a analyzing means for analyzing the substance to be inspected, a first determination means having a first standard data for determining the dangerous substance based on analyzing data obtained by the analyzing means,

a communication means for communicating with the support system through the communication line, a display means, and a control means for controlling the each means of the terminal system,

the support system comprises a communication means for communicating with the terminal system through the communication line, a database for storing at least data relating to determination of the dangerous substance, a second determination mean for determining the dangerous substance by comparing the analyzing data received from the terminal system, and a control means for controlling the each means of the support system, wherein

the first determination means of the terminal system performs a first determination to determine the kind and the existence of the dangerous substance by comparing the analyzing data with the first standard data,

when the first determination means determines the existence of the dangerous substance, the control means of the terminal system performs a second analyzing process in the analyzing means, and transmits an analyzing data obtained by the second analyzing process to the support system through the communication means of the terminal system, and

the second determination means of the support system has second standard data, and performs a second determination to determine the kind and the existence of the dangerous substance by comparing the analyzing data obtained by the second analyzing process and received from the terminal system through the communication means with the second standard data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
